

Assembly Instructions

KITCHEN ISLAND

EN

RÖSHULTS

Installation

1. Before you install your Kitchen Island make sure the surface where you want to place it is clean and free from stones or other small objects.
2. Put the frame in the right position.
3. To find a horizontal adjustment, use the adjustable feet under the frame.
4. In each section there is a large storage compartment with a removable shelf. The doors can be assembled to be either left- or right hinged. They are assembled as specified in order when delivered. Behind each section there is a space adapted for gas hoses and outlets/water hose so you can easily place your modules on the cabinet top shelf. Each module have adjustable feet to fit into the frame.
5. To get the right finish after installation and to prevent water, other liquids, dirt, grease and similar to collect under the top shelf or in cabinets, let a specialist add silicone on the cabinet top shelves and against the side panels.

IMPORTANT! To ensure that your Kitchen Island ages with dignity it is imperative that you read and follow our Maintenance & Care instructions found with your delivery.

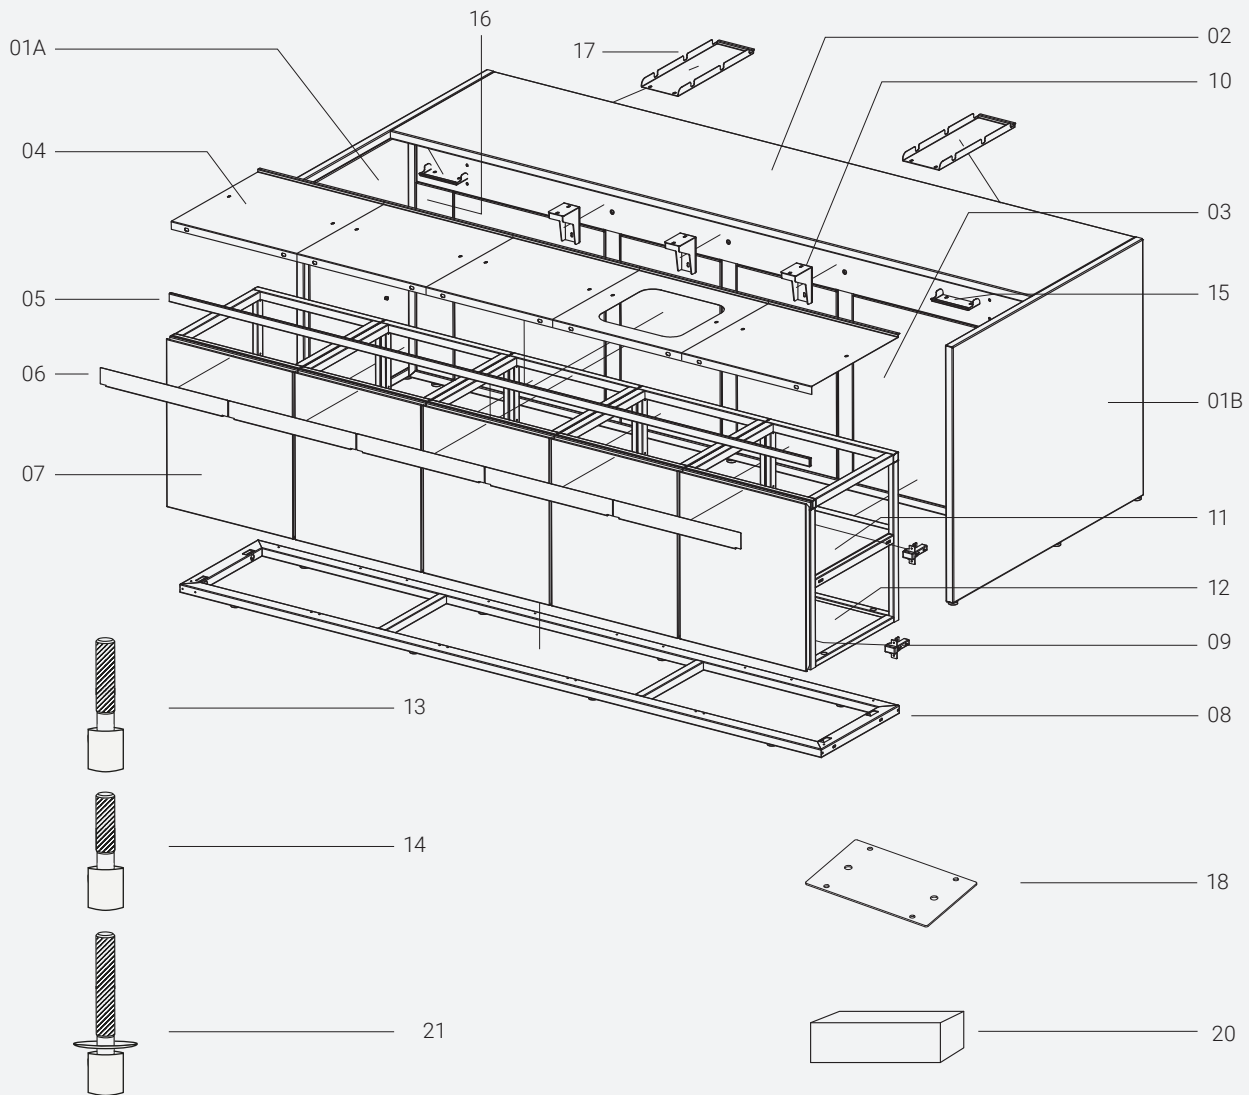

⚠ Warning!

Do not place flammable products or liquids in the cabinets under a gas or charcoal grill.
